THE FIRST AIM OF OUR IS TO PROVIDE
THE BEST SUITABLE QUALITY.

ROTHER BRAND THAT HAS ENLARGED ITS PRODUCT SCALES WIDER IN A SHORT PERIOD OF TIME HAS A VALUABLE GOAL FOR SUPPLYING THE SAME AND THE BEST QUALITY AT EVERY ITEMS THAT LED BULBS, LED PANELS, LED FLOODLIGHTS AND LED FITTINGS. WE FORM OUR LIGHTING PRODUCT GROUPS WITH OUR PERCEPTION ON PRODUCTION MINDING THE ENVIRONMENT AND HUMAN HEALTH.

THE GROUP OF LED LIGHTING PRODUCTS NEVER CONTAIN
HAZARDOUS MATERIALS LIKE MERCURY, ARGON & EMITS UV
AND INFRARED RAYS.

TABLE OF CONTENTS

LED BULBS

Led Bulbs E27 - B22	G45 Led Bulbs
Led T Bulbs E27 - B22	Reflector Led Bulbs R50 - R63
Led Filament Bulbs	Led Spotlights
Radar Sensor Led Bulbs	G4 - G9 Mini Led Bulbs
Dimmable Led Bulbs	Colored Led Bulbs
Led Candle Bulbs	

LED FLOODLIGHTS LED STREET LIGHTS

SMD Ultra Slim Led Floodlights	Solar Led Street Lights
SMD Led Floodlights	With Remote Control
SMD Led Slim Floodlights With Sensor	SMD & COB Solar Led Street Lights
Solar Led Floodlights	With Remote Control
With Remote Control	Led High Bay Lights
COB & SMD Led Street Lights	

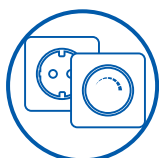

LED PANEL LIGHTS

Led Recessed Panel Lights Round	Led Recessed Double Colored Panel Lights
Led Recessed Panel Lights Square	Round - Led Surface Double Panel Lights
Led Surface Panel Lights Round	Frameless Led Panel Lights
Led Surface Panel Lights Square	Led Backlights - Led Ceiling Lamps
Led Panel Lights	Frameless Surface Mounted Led Panels
60x60 Panel Lights	
GU10 - GU5.3 Led Sets	
Led Panel Lights - Led Panel Drivers	
Fire Rated Fitting	
Round & Oval Led Bulkheads	

LED TUBES - FITTINGS - ACCESSORIES

Led Glass Tubes	Led Wall Lamps
Led Glass Tube With Batten Set	RGB Led Strip Light
Fitting & Fixtures	Two Lines RGB Led Strip Lights
Exhaust Fans	One Line Led Strip Lights
Ceiling Fans	Two - Three Lines Led Strip Lights
Led String Lights	Neon Led Strip Lights
Rechargeable Led	Remote Controller
Flashlight	Rgb Controller & Connector
Rechargeable Led	Rgb Controller & Connector For Led Strip
Butterfly Worklight	

SWITCHES - SOCKETS - ELECTRIC EQUIPMENTS

Rother is a British brand that has started its operations in 2004.
We are supplying Led Lamps, Led Floodlights, Street Lights, Led Armatures,
Led Panels, Pendants and Lighting Accessories.

Quality

Rother Electric has an executing way of never abandoning on the service and item quality, always focusing on customer requirements and conveying the service on time.

Technology

R&D activities on our current items and new items continue as fast as possible. Any kind of innovations and developments on lighting area are being observed closely and formed and contributed in accordance with all markets requirements where we operate with Rother brand.

Energy Saving

Led bulb models contributes on energy saving of 90% comparing to the old fashioned lighting methods whereas cfl models does it by 50%.

Durability

The product life time is long term based on the quality of the materials used on production and proper use of the instructions

Sustainability

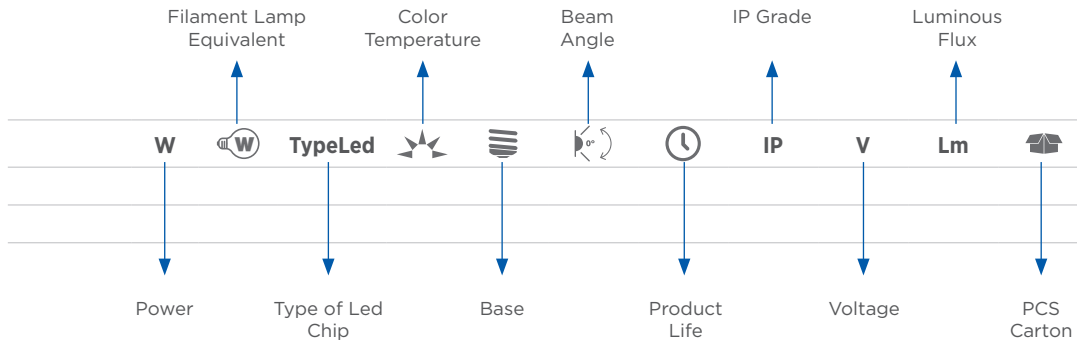

As rother, we provide great continious services to our customers. For after-sales services, our colleagues supply all the supports and information to be useful. Our R&D department always works on various projects that will be provided a competitive advantages for our business partners.

COMPARISON TABLE

Elements Of The Table

International Signs

Free of liquid mercury. Product compliance with all EU RoHS requirements (Restriction of Hazardous Substances)

Free of liquid mercury

Product compliance with all requirements of EU directives. CE mark is a direct evidence of product safety

Instant lighting at switching on

100% luminous flux throughout the service life

100° (Detection angle, provided that it is installed on the wall) 360° (detection angle, provided that it is installed on the ceiling)

IP Code is a degree of protection against exterior impacts under the European countries regulations. The first digit (from 0 to 6) means the level of protection against ingress of exterior items and dust, the second digit (from 0 to 8) means resistance to the impact of moisture. The higher the digit, the higher the resistance degree.

Sensors are intended only for internal lighting of premises. They are not intended for use in operating premises with increased content of dust moisture

Sensors with protection against ingress of dust with the size over 1mm, drops and splashes that fall on the body at any angle

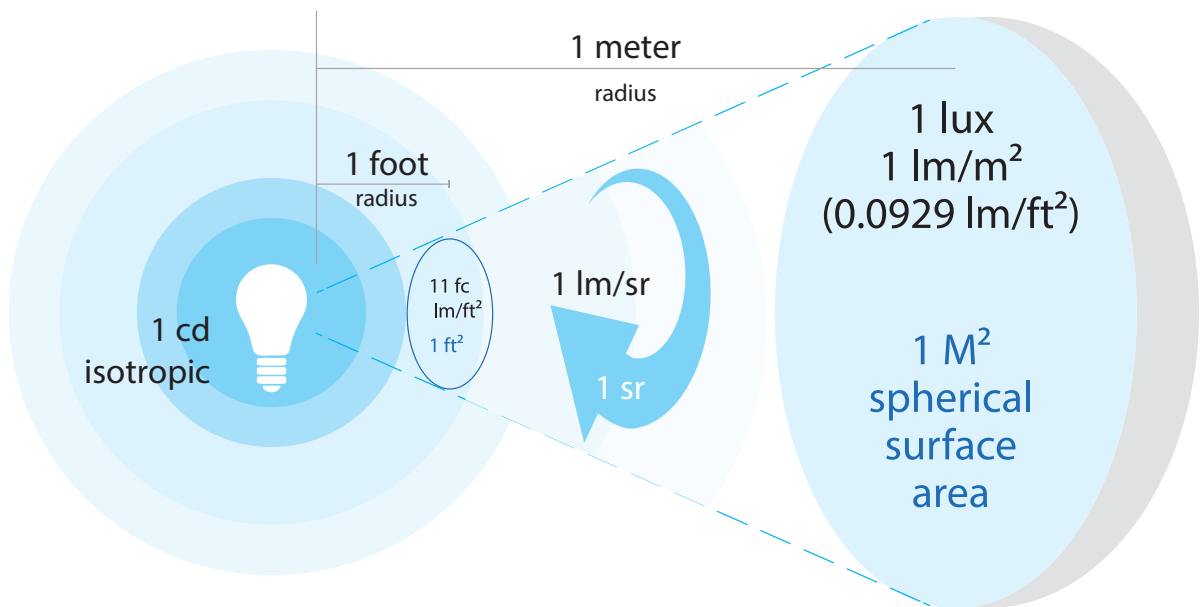

Sensors with full protection against ingress of dust, drops and splashes that fall on the body at any angle

Watts

Watts

A watt is a measurement of electrical power, formally equal to the amount of energy in 1 ampere of current flowing at 1 volt. A light bulb that is rated at, say, 200 watts use more electricity to produce light than a bulb rated for 100 watts.

Luminance

Luminance L is the luminous intensity emitted by the surface area of 1 cm^2 (or 1 m^2) of the light source.

Luminous Flux

Luminous flux is the quantity of the energy of the light emitted per second in all directions. The unit of luminous flux is lumen (lm).

Led's Advantages

1. LED Light Lifetime:

Easily the most significant advantage of LEDs when compared to traditional lighting solutions is the long lifespan. The average LED lasts 25,000 operating hours to 50,000 operating hours or more. That is 2-4 times as long as most fluorescent, metal halide, and even sodium vapor lights. It is more than 40 times as long as the average incandescent bulb.

2. LED Energy Efficiency:

LEDs generally consume very low amounts of power. The statistics to look for when comparing the energy efficiency of different lighting solutions are called by luminous efficacy. These two items essentially describe the amount of light emitted per unit of power (watts) consumed by the bulb. In our experience most LED lighting retrofit projects result in a 60-75% improvement in the overall energy efficiency of the facility's lighting. Depending on the existing lights and the particular LEDs installed, the savings could be more than 90%.

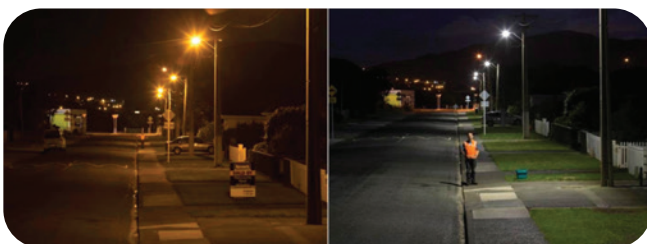

3. Better Safety Products With LEDs:

Safety is perhaps the most often overlooked advantage when it comes to LED lighting. The number one hazard when it comes to lighting is the emission of heat. LEDs emit almost no forward heat while traditional bulbs like incandescents convert more than 90% of the total energy used to power them directly into heat. That means only 10% of the energy powering incandescent lights is actually used for light. Additionally, because LEDs consume less power they can operate effectively on low-voltage electrical systems. These are generally much safer in the event that something goes wrong.

4. LEDs Have Great Color Rendering Index (CRI):

CRI measures the ability of a light source to reveal colors of objects in contrast to a natural light source, such as the sun filtering in through your windows. LEDs generally have very high (good) ratings when it comes to CRI.

Perhaps the best way to appreciate CRI is to look at a direct comparison between LED lighting (with a high CRI) and a traditional lighting solution like sodium vapor lamps. See the following image to compare and contrast the two instances:

5. LEDs Generate Directional Emissions:

LED technology emits light for only 180 degrees. Every other type of light emits light 360 degrees around the source. 360 degree emissions necessitate accessory devices to reflect and/or redirect the light. Consider a light that emits light into the ceiling that is your standard bulb. The problem is that you're trying to illuminate the room, not the ceiling. LEDs solve this problem completely and give the savings back in terms of the system's overall energy efficiency.

6. LEDs Have Tremendous Design Flexibility:

Because LEDs are so small they can be used in virtually any application you can think of. They can be combined in bunches for a traditional bulb, used in isolation as a small device light, or strung out in sequence in a linear fashion. Just about everything you can think of can be done with LEDs. Design flexibility enables also multipurposal functions to be used in all sort of LED products including bulbs. Microwave and photocell sensors, drivers managing 3 different color temperatures and many more can be built in the products with LEDs to provide wide solutions for end user's need.

7. LEDs Provide Instantaneous Turn On & Do Not Have Issues With Frequent Switching:

LEDs turn on and off instantaneously. There is no warm-up period like in the case of metal halide lamps. Additionally, frequent switching doesn't cause degradation in the device.

8. LED Lights Are Environmentally Safe:

LEDs do not have the environmental issues common to traditional lighting solutions like fluorescent or mercury vapor lights. Both of these traditional solutions contain mercury internal to the bulb and thus require special handling at the end of the product's useful lifespan. None of these considerations are necessary with LEDs.

9. LEDs Produce Virtually Zero UV Emissions:

LEDs emit the vast majority of their energy in the visible spectrum, a small amount in the infrared spectrum, and virtually none in the ultraviolet portion of the spectrum. This means that LEDs are able to safely and reliably illuminate UV sensitive items like art that will break down and degrade over time if exposed to this type of emission.

10. LEDs Operate Well In Cold and Hot Temperatures:

LEDs work well in a wide range of operating temperatures without significant degradation.

TECHNOLOGY

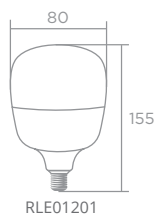

R&D activities on our current items and new items continue as fast as possible. Any kind of innovations and developments on lighting area are being observed closely and formed and contributed in accordance with all markets requirements where we operate with Rother brand.
